

Laser Root Planing Post Operative Instructions

After-Care Instructions

Rinse or swab the treated areas with Peridex twice daily as instructed until you are able to thoroughly brush and use the Perio-Aid (toothpick). Diligent daily plaque removal is essential for healing and optimal treatment outcome. Your periodontal maintenance program will depend upon your periodontal health and home-care. At re-evaluation several months later, Dr. Robison and the Hygienist can decide if local surgery is needed. Please note that these visits **Do Not** take the place of your annual check-ups.

*Note: If you smoke, the results of your treatment may be compromised.
